1. The first group of people who are interested in the study of the history of the world are the historians. They are people who study the past and try to understand what happened and why it happened. They use a variety of sources, including books, documents, and artifacts, to reconstruct the past. They also try to understand the people who lived in the past and how they thought and felt. Historians are interested in the past for a variety of reasons. Some are interested in the past because they want to know what happened and why it happened. Others are interested in the past because they want to understand the people who lived in the past and how they thought and felt. Still others are interested in the past because they want to learn from the mistakes of the past and avoid them in the future.

1. The first part of the paper is devoted to a discussion of the general principles of the theory of the structure of the atom. It is shown that the structure of the atom is determined by the laws of quantum mechanics, and that the structure of the atom is determined by the laws of quantum mechanics.

6 *Stachycephala olivacea* recorded -
2nd June 25

7 *Myzomela melanotis*, seen at
+ notes in *Hypotaenidia*

Notes on *Myzomela* species

To be done - Work to be done on
information about birds

- Work to be done on birds in
the surrounding area

Work to be done

- Send record report to the
authorities

- Under *Myzomela* notes on
the birds in the area

Summary in nests (Cupp
18-20), written 6-7-64 on reading
over Zerkow's Zepo Summary
of Expedition 1st time w/
comment (1st draft)

I believed & assumed found
(see my note p 21) and was
under the impression
I had made notes on all
of these but in checking
my notes against Zerkow's
I found I had not,
3 nests. Worse than this
is the fact that Zerkow
has a summary
list of 5. Apparently,
missed seeing one but
cannot understand my
neglect to record
details of one of the
others & not see
I had below my numbers
against Zerkow's.
